

VULNERABILITY ASSESSMENT & PENETRATION TESTING (VAPT) FINAL REPORT

Target: <https://example.com>

Assessment Date: 2026-08-15

Lead Auditor: Security Auditor

Document Title	Security Assessment Report
Generated By	Security Management Platform (SMP) V9.5 Stable
Target Application	https://example.com
Target Company	—
Submitted To	Internal Security Team
Date of Assessment	2026-08-15
Lead Penetration Tester	Security Auditor
QA Reviewer	QA Manager
Data Classification	CONFIDENTIAL — INTERNAL USE ONLY
Document Version	1.0
Verification Hash (SHA-256)	34f293d62b1b2fc91949d454704a58a38f99d4a6e85744d2a94fc7cd18d916e0

Document Version Control

Version	Date	Author	Reviewer	Description
0.1 Draft	2026-08-15	Security Auditor	—	Initial automated scan draft
1.0 Final	2026-08-15	Security Auditor	QA Manager	Final delivery

■ CLASSIFICATION: CONFIDENTIAL — INTERNAL USE ONLY — NOT FOR DISTRIBUTION

SECTION 2

Table of Contents & Executive Summary

- 1. Document Control & Cover Page
- 2. Table of Contents & Executive Summary
- 3. Engagement Scope & Methodology Boundaries
- 4. Findings Summary Matrix
- 5. Deep-Dive Technical Findings
- 5B. Automated Hardening Recommendations & Action Plan
- 6A. Appendix A — Security Assessment Tooling
- 6B. Appendix B — Post-Testing Environment Clean-up Log
- 6C. Appendix C — Severity Definitions Glossary
- 6D. Appendix D — Formal Attestation & Sign-off

Neural Correlation Engine (Brain)

No significant vulnerabilities were detected to generate AI insights.

The assessment of <https://example.com> indicates a **LOW-TO-MODERATE security posture**. No Critical or High findings were identified during this engagement. 0 Low severity and informational observations were recorded. The application demonstrates a reasonable security baseline; continued periodic assessment and hardening are recommended.

This assessment was conducted using Security Management Platform (SMP) employing a 35-module automated VAPT pipeline. All findings are based on authenticated and unauthenticated probes against the live target. Results reflect the security posture of the target at the time of the assessment and should be validated against the production environment before remediation.

Historical Scan Trend Analysis

No previous data found. This is the first recorded assessment for this target.

Risk Metric Dashboard

CRITICAL	HIGH	MEDIUM	LOW	INFO
----------	------	--------	-----	------

0	0	0	0	0
---	---	---	---	---

Strategic Action Plan (Management Summary)

MAINTAIN: No critical findings. Continue scheduled quarterly assessments. Monitor CVE feeds and apply patches within standard SLA windows.

SECTION 3

Engagement Scope & Methodology Boundaries

In-Scope Asset Inventory

Asset / Host	URL / Port	Asset Type	Auth Status
Primary Target	https://example.com	Web Application	Authorized

Out-of-Scope / Excluded Assets

Excluded Asset / Endpoint	Reason for Exclusion
Third-party payment processors (e.g., Stripe, PayPal)	Legal boundary — vendor-controlled
Cloud provider management consoles (AWS, GCP, Azure)	Vendor infrastructure — not authorized
Third-party SSO / OAuth providers	Vendor-controlled authentication endpoints
CDN infrastructure (Cloudflare, Fastly)	Shared infrastructure — potential collateral impact

Testing Timeline

Engagement Start	2026-08-15 12:07:36
Engagement End	2026-08-15 12:07:36
Timezone	UTC+05:30 (IST) — as recorded by the scanning host
Scan Duration	Automated multi-tool pipeline, sequential execution
Testing Type	Black Box / Gray Box — no source code access

Assessment Framework Compliance Coverage

Framework / Standard	Calculated Coverage & Scope
OWASP Top 10 (2021)	0% Coverage (0/10 categories hit)
CIS Controls v8	0% Coverage (0/11 controls hit)
ISO 27001:2022	0% Coverage (0/11 controls hit)
SOC 2 Type II	0% Coverage (0/11 controls hit)
PCI-DSS v4.0	0% Coverage (0/12 requirements hit)
NIST SP 800-115	Technical Guide to Information Security Testing — primary methodology

SECTION 4

Findings Summary Matrix

No findings were recorded for this scan.

SECTION 5

Deep-Dive Technical Findings

No technical findings to document.

SECTION 5B

Automated Hardening Recommendations

No specific infrastructure hardening templates matched the active findings list.

SECTION 6A

Appendix A — Security Assessment Tooling

Tool	Purpose	Type	Method
No specific tools recorded	Automated Security Assessment Tool	Mixed	Active/Passive

SECTION 6B

Appendix B — Post-Testing Environment Clean-up Log

The following log certifies that the test environment was left in a clean state following the assessment. All test artefacts have been removed or documented.

Artefact Type	Details	Date / Time	Removal / Status
Test Accounts Created	None — black-box assessment; no test accounts were provisioned	2026-08-15	N/A — Not Created
Injected Payloads	Automated tool payloads (Nuclei, ffuf, Nikto, SQLMap)	2026-08-15	Transient — cleared on session end
Modified Database Rows	None — read-only assessment. SQLMap run in detection-only mode	2026-08-15	N/A — No Modifications
Files Uploaded / Created	None — no file upload testing performed	2026-08-15	N/A
Sessions / Cookies Modified	Standard browser sessions during active scanning only	2026-08-15	Cleared on session end

Appendix C — Vulnerability Severity Definitions Glossary

CRITICAL	CVSS Base Score 9.0–10.0. Exploitation requires no authentication and no user interaction. Leads to full system compromise, remote code execution, or complete data exfiltration. Requires immediate remediation before next business day.
HIGH	CVSS Base Score 7.0–8.9. Exploitation is straightforward and may require minimal privileges. Significant confidentiality, integrity, or availability impact. Remediation required within 24–72 hours.
MEDIUM	CVSS Base Score 4.0–6.9. Exploitation requires specific conditions (authenticated user, social engineering, or chained vulnerabilities). Moderate impact. Remediation required within 14–30 days.
LOW	CVSS Base Score 0.1–3.9. Limited attack surface or impact. Represents hardening opportunities or minor information disclosures. Remediation at next maintenance window (30–90 days).
INFORMATIONAL	CVSS Base Score 0.0. No direct exploitability. Observations, recon data, or best-practice deviations. Document and review during next security review cycle.

CVSS Base Metric Vector Definitions

AV — Attack Vector	N=Network, A=Adjacent, L=Local, P=Physical
AC — Attack Complexity	L=Low, H=High
PR — Privileges Required	N=None, L=Low, H=High
UI — User Interaction	N=None, R=Required
VC/VI/VA	Impact on Confidentiality / Integrity / Availability: N=None, L=Low, H=High
SC/SI/SA	Subsequent System impact: N=None, L=Low, H=High

SECTION 6D

Appendix D — Formal Attestation & Sign-off

Formal Attestation Letter

This Vulnerability Assessment and Penetration Testing (VAPT) Final Report has been prepared by the Security Management Platform (SMP) automated assessment engine on behalf of the designated Lead Penetration Tester, **Security Auditor**.

The assessment was conducted against the target system **https://example.com** on **2026-08-15** in accordance with the following professional and ethical standards:

- The engagement was performed under explicit written authorization from the asset owner.
- All testing was conducted within the declared scope boundaries. No out-of-scope assets were accessed.
- Assessment methodologies comply with OWASP WSTG v9.4.3 and NIST SP 800-115.
- All test artefacts and injected payloads have been removed from the target environment.
- No production data was exfiltrated, stored, or retained by the testing team.
- This document contains confidential information and is classified for INTERNAL USE ONLY.

The undersigned affirm that this assessment was completed in full accordance with professional ethical hacking standards and that all findings documented herein represent accurate, reproducible security observations at the time of the engagement.
